Jesús M. Rueda-Becerril | Ph.D.

Seattle, WA | jm.ruebe@gmail.com | +1 (765) 430-2330 | linkedin.com/in/jeruebe | altjerue.github.io

Professional Summary

Computational Scientist (PhD, Physics) with 10+ years building high-performance numerical algorithms and physics-based simulations. Expertise in scientific machine learning and geospatial data analysis. Architect of open-source simulation libraries, leader of funded research projects, and translator of complex physical models into production-quality scientific software across cross-functional research and engineering teams.

Skills

Languages: Python, C/C++, R, Rust, SQL, Fortran 95, Java, Julia, Shell

ML & Data: Scientific machine learning, PyTorch, scikit-learn, TensorFlow, random forest, neural networks, SVM, gradient-based optimization, ML-assisted parameter estimation, NumPy, SciPy, Pandas, Astropy

Geospatial: Sentinel-1/2 multispectral processing, raster/vector data pipelines, QGIS

HPC & Parallel: OpenMP, OpenACC (GPU offloading), MPI, SLURM, PBS, HDF5

Tools: Git, Docker, Azure, Jenkins, Kafka, Jira, ParaView, VisIt

Experience

Independent Contractor, *Mercor* **Jan 2026 – Present**

Physics subject-matter expert evaluating frontier language models for multiple leading AI labs.

- Review 50+ expert-level physics, hydrodynamics, astrophysics, and cosmology problems for leading AI labs; write original prompts that stump frontier models and diagnose failure modes in their reasoning.

Spatial Data Scientist, *TealWaters* **May 2025 – Jan 2026**

Built geospatial ML pipelines and optimized terrain-analysis code for wetland mapping.

- Optimized the terrain-modeling code that computes elevation derivatives from 1 m, 3 m, and 10 m DEMs over 20 tiles, improving its computational performance.
- Mapped wetland probability across the 2,160 km² Skykomish watershed with the Wetland Intrinsic Potential (WIP) random-forest model, reaching >75% accuracy.

Independent Researcher & Open-Source Developer, *Self-directed* **Jan 2024 – May 2025**

Continued simulation research and open-source development between industry roles.

- Co-developed Tleco, a Rust/Python toolkit that solves the Fokker–Planck equation coupled to radiative transfer to model radiation from relativistic outflows (ApJ 2024).
- Developing WindsOfChange with the UW Forest Mycobiome Lab: a C++/R library that simulates wind-driven spore dispersal over forested, hilly terrain, parallelized with RcppParallel and OpenMP.

Software Engineer, *Paychex* **Apr 2022 – Jan 2024**

Built and tested data-integration services between enterprise systems and Oracle E-Business Suite.

- Developed and tested production data-pipeline software (Java, Python, SQL) with CI/CD.

Postdoctoral Research Associate, *Rochester Institute of Technology* **Feb 2021 – Apr 2022**

HPC simulations of supermassive black hole binaries in an NSF-funded project.

- Led a 7-person team upgrading PatchworkMHD, a C code for MHD simulations of supermassive black hole binaries; added black hole spin with under 5% runtime overhead.
- Ran and benchmarked large production simulations on Frontera (TACC), about 10,000 node-hours, and identified performance bottlenecks in the parallel code.
- Calibrated Paramo against Fermi-LAT gamma-ray spectra with gradient-based optimization that updates the model automatically; supervised a graduate student on the same problem.
- Co-authored 2 papers from a multi-institution study of binary neutron star mergers.

Postdoctoral Research Fellow, *Purdue University* **Oct 2018 – Nov 2020**

Radiative-transfer modeling of relativistic jets (blazars and gamma-ray burst afterglows).

- Designed and wrote Paramo, an open-source Fortran 95 library that solves the Fokker–Planck equation for relativistic particle distributions coupled to radiative transfer; optimized it with OpenMP and tested GPU offload with OpenACC.
- Implemented implicit PDE solvers, numerical integration, and arbitrary-shape particle distributions without slowing the simulation.
- Wrote Python tools to analyze Paramo output and run parameter optimization; other groups have adopted Paramo, including Combi & Siegel (2023).
- Served as co-I on two NASA Fermi Guest Investigator grant proposals, one funded ($68K) to model blazar radiation; mentored 3 graduate students and published 2 peer-reviewed papers.

Postdoctoral Research Fellow, *Universidad Michoacana de San Nicolás de Hidalgo* **Jan 2018 – Sep 2018**

- Developed a Python pipeline to process black hole simulation outputs from the GRTrans numerical code, generating SVM training data for radio image prediction.
- Built open-source data analysis and visualization tools in Python for radiative transfer phenomena in relativistic astrophysics scenarios.

Graduate Research Assistant, *Universitat de València* **Oct 2011 – Jul 2017**

- Studied how magnetization of shocked plasma shapes the radiation spectra of relativistic internal shocks, using the C-SPEV simulation code.

Education

Universitat de València, *Ph.D. in Physics, Excellent Cum Laude* **Jul 2017**

Universidad Michoacana de San Nicolás de Hidalgo, *M.Sc. in Physics* **Sep 2011**

Universidad Autónoma del Estado de México, *B.Sc. in Physics* **Dec 2008**

Projects

Blazar Population ML **Jan 2026 – Present**

Scientific ML (Python, scikit-learn, PyTorch) github.com/altjerue/ilwikak-ml

- Applying classical ML and Bayesian inference to the Fermi-LAT 4LAC-DR3 catalog (3,407 sources) to recover physical jet parameters from multi-wavelength data.
- Building a neural-network emulator of the physics-based Tleco model that maps physical jet parameters to observable spectral energy distributions, to be validated against Tleco output (in progress).
- Forecasting blazar gamma-ray flares with a time-series foundation model fine-tuned on Tleco-generated synthetic light curves.

Selected Publications (9 peer-reviewed articles, 3 first-author)
