

Jesús M. Rueda-Becerril | Ph.D.

Seattle, WA | jm.ruebe@gmail.com | +1 (765) 430-2330 | [linkedin.com/in/jeruebe](https://www.linkedin.com/in/jeruebe) | altjerue.github.io

Profile

Research Scientist with expertise in scientific machine learning, numerical simulation, and geospatial data analysis. Strong mathematical foundations with a track record of architecting open-source simulation libraries, leading funded research projects, and translating complex physical models into production-quality scientific software. Experienced working across cross-functional research and engineering teams.

Skills

ML & Data: Scientific ML, PyTorch, TensorFlow, scikit-learn, NumPy, SciPy, Pandas, ML-assisted parameter estimation, gradient-based optimization, SVM, random forest, neural networks

HPC & Parallel: OpenMP, MPI, OpenACC, SLURM, PBS, HDF5, large-scale parallel CPU computing

Geospatial & Remote Sensing: Sentinel-1/2 multispectral processing, raster/vector data pipelines, QGIS, geospatial feature engineering for ML

Languages: Python, C/C++, Fortran 95, R, SQL, Shell, Rust, Java, Julia

Tools: Git, Docker, Azure, Jenkins, Kafka, Jira, Paraview, VisIt

Experience

Independent Contractor, *Mercor*, Jan 2026 — Present.

- Provide deep expertise in physics and numerical methods to improve LLM models for a top AI lab.

Spatial Data Scientist, *TealWaters*, May 2025 — Jan 2026.

- Led optimization of scientific code for topographic terrain modeling, improving computational performance of elevation derivative calculations.
- Engineered Python tools for geospatial data processing and analysis; applied random forest ML for wetland probability mapping.
- Performed EDA, feature engineering, and geospatial data preparation including multispectral (Sentinel-1/2) processing for ML/AI land-cover models.
- Collaborated with software engineers and scientific team to transition prototype simulation tools into production.

Software Engineer, *Paychex*, Apr 2022 — Jan 2024.

- Developed Java Kafka consumers for high-throughput data transfer across enterprise databases; deployed to production via Jenkins and OpenShift using CI/CD pipelines.
- Conducted SQL data preparation, validation, and analysis from Oracle EBS datasets; built Splunk dashboards for production monitoring.
- Developed Python tests ensuring software quality and continuous integration standards.

Postdoctoral Research Associate, *Rochester Institute of Technology*, Feb 2021 — Apr 2022.

- Led NSF-sponsored project to upgrade PatchworkMHD, a large-scale C-based HPC simulation code for modeling supermassive black hole binaries using state-of-the-art numerical techniques.
- Implemented new physics features (black hole spin) to the simulation library without impacting runtime, demonstrating expertise in large-scale scientific software architecture.
- Designed and ran large-scale computational experiments on the Frontera supercomputer (TACC), benchmarking and identifying performance optimization opportunities in parallel HPC code.
- Applied scientific machine learning (gradient-based optimization) to calibrate physical model parameters in Paramo against Fermi-LAT telescope observations, demonstrating ML-assisted simulation workflows for complex physical systems.
- Collaborated on multi-institutional HPC simulation project studying binary neutron star mergers, resulting in 2 publications.

Postdoctoral Research Fellow, *Purdue University*, Oct 2018 – Nov 2020.

- Architected and developed Paramo, an open-source multiscale/multiphysics simulation library in Fortran 95 modeling relativistic particle distributions via the Fokker-Planck equation coupled with radiative transfer across temporal and spatial scales; accelerated via OpenMP parallelization; explored GPU acceleration via OpenACC.
- Implemented advanced numerical methods including sophisticated PDE solvers, numerical integration, and particle distribution algorithms with arbitrary shape support, without impacting simulation runtime.
- Designed Python analysis and visualization tools interfacing with the Paramo simulation library, enabling statistical modeling and parameter optimization workflows.
- Obtained and led a NASA grant (\$68K) to model radiation from active galaxies; managed 3 PhD researchers and published 2 peer-reviewed papers.

Postdoctoral Research Fellow, *Universidad Michoacana de San Nicolás de Hidalgo*, Jan – Sep 2018.

- Developed a Python pipeline to process black hole simulation outputs from the GRTrans numerical code, generating SVM training data for radio image prediction.
- Built open-source data analysis and visualization tools in Python for radiative transfer phenomena in relativistic astrophysics scenarios.

Graduate Research Assistant, *Universitat de València*, Oct 2011 – Jul 2017.

- Independently developed Shell and Python pipelines to run the C-SPEV radiative transfer simulation code and process large HDF5 output datasets.
- Implemented numerical tools and data handling extensions to C-SPEV for computing both discrete and continuous spectra from particle distributions with arbitrary shape.
- Published 2 first-author papers on numerical simulations of relativistic plasma dynamics.

Projects

Blazar Population ML, *Scientific ML (Python, scikit-learn, PyTorch)*, Jan 2026 — Present. github.com/altjerue/ilwikak-ml

- Applying classical ML and Bayesian inference to the Fermi-LAT 4LAC-DR3 catalog (3,407 sources) to recover physical jet parameters from multi-wavelength observational data.
- Building a neural network to learn the mapping from physical jet parameters to observable SEDs accurately enough to compare with Tleco results.
- Forecasting blazar gamma-ray flares using a general-purpose time series foundation model, fine-tuned with Tleco-generated synthetic light curves.

WindsOfChange, *Open-Source Lagrangian Particle Simulation Library* [UW-ForestMycobiomeLab/WindSporesHills](https://github.com/UW-ForestMycobiomeLab/WindSporesHills) (R/C++), Aug 2024 — Present.

- Developed C++ library implementing Lagrangian particle dispersion, atmospheric turbulence, and fluid flow over complex hilly terrain with forest canopy, based on analytical models (Massman & Weil 1999; Finnigan & Belcher 2004).
- Parallelized particle tracking using RcppParallel and OpenMP; designed for scalability to tens of thousands of particles across kilometer-scale domains.

Tleco, *Open-Source Physics Simulation Library*, Jan 2024 — Sep 2024.

github.com/zkdavis/Tleco

- Multiscale/multiphysics simulation toolkit combining Rust and Python interfaces for modeling relativistic particle distributions via Fokker-Planck equations coupled with radiative transfer.
- Implements numerical PDE solvers, particle distribution algorithms, and spectral calculation methods for relativistic plasma physics.

Paramo, *Open-Source Physics Simulation Code (CONAHCYT Funded)*, Oct 2018 — Apr 2022. github.com/altjerue/paramo

- Modular physics simulation library (Fortran 95 + OpenMP) modeling relativistic particle radiation; predecessor to Tleco.

Selected Publications (9 total, 2 first-author)

- Davis, Z., **Rueda-Becerril, J. M.**, & Giannios, D. *Tleco: A Toolkit for Modeling Radiative Signatures from Relativistic Outflows*, *ApJ* **976**, 182, (2024), [arXiv:2405.17581](https://arxiv.org/abs/2405.17581).
- **Rueda-Becerril, J. M.**, Harrison, A. O. & Giannios, D. *Blazar jets launched with similar energy per baryon, independently of their power*, *MNRAS* **501**, 4092–4102, (2021), [arXiv:2009.02273](https://arxiv.org/abs/2009.02273).
- **Rueda-Becerril, J. M.**, Mimica, P. & Aloy, M. A. *On the influence of a hybrid thermal–non-thermal distribution in the internal shocks model for blazars*, *MNRAS* **468**, 1169–1182, (2017), [arXiv:1612.06383](https://arxiv.org/abs/1612.06383).

Education

Ph.D. in Physics, *Universitat de València, Valencia, Spain*, Jul. 2017.

Excellent *Cum Laude*

M.Sc. in Physics, *Universidad Michoacana de San Nicolás de Hidalgo, Morelia, Mexico*, Sep. 2011.

B.Sc. in Physics, *Universidad Autónoma del Estado de México, Toluca, Mexico*, Dec. 2008.
